

Distributed cognition in AI-enabled teams.

Every piece of context exists twice. The real work is keeping the two in sync.

DRIVE.

Decide what done means. Request properly. Iterate intelligently. Validate against good criteria. Then evolve the practice.

DRIVE

Decide

What does "done" mean?

Request

intent, context, assumptions, success criteria

Iterate

stay in the loop and steer it

Validate

confirm against done and success criteria

Evolve

debrief, then update tooling, context, and practice
